

NEW CAPABILITIES

We have doubled our facilities

More engineering and manufacturing capabilities for your products.

What we have expanded

R&D and engineering

More space for PCB design, firmware and prototypes, close to manufacturing.

Manufacturing

A larger production area, with new machinery for custom electronic manufacturing.

Component logistics

More storage space, with a new carousel system for components and small parts.

From electronic design to series production

Capabilities available in-house:

● Electronic and PCB design

● SMT and through-hole assembly

● Automated optical inspection (AOI)

● Functional testing

● Conformal coating and potting

● Mechanical integration and packaging

Electronics for your equipment

Motor drives, temperature controllers, thermostats and custom electronics for manufacturers of:

Electric motors

Fans and ventilation

Pumps and compressors

HVAC and refrigeration

Let's explore how these capabilities could support your products.

KELD · Engineering + Manufacturing, together.
